

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

# T6963C

## DOT MATRIX LCD CONTROLLER LSI

The T6963C is an LCD controller designed to be used with LCD control driver LSIs and data display memories. The device has an 8-bit parallel data bus and control lines for reading or writing through an MPU interface. It can be directly connected to a TMPZ-80.

It has a 128-word character generator ROM which can control an external display RAM of up to 64 Kbytes. Allocation of text, graphics and external character generator RAM can be made easily and the display window can be moved freely within the allocated memory range.

The device supports a very broad range of LCD formats by allowing selection of different combinations via a set of programmable inputs. It can be used in text, graphic and combination text-and-graphic modes, and includes various attribute functions.

Weight: 1.2 g (typ.)

### Features

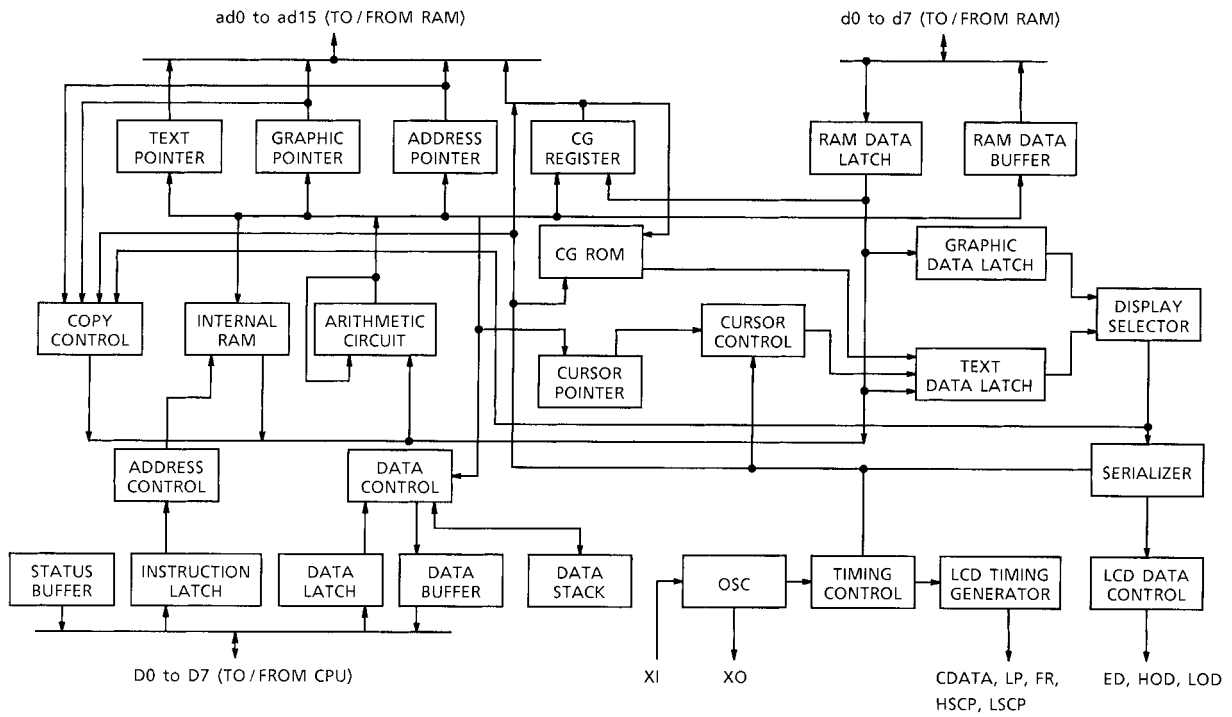

- Display format (pin-selectable)
  - Columns : 32, 40, 64, 80
  - Lines : 2, 4, 6, 8, 10, 12, 14, 16, 20, 24, 28, 32

The combination of number of columns and number of lines must not cause the frequency to exceed 5.5 MHz. (See Fig. 2)
- Character font (pinselectable)
  - Horizontal dots : 5, 6, 7, 8
  - Vertical dots : 8 (fixed)

It is necessary to set a character font in Graphic mode just as in Text mode. The oscillation frequency does not change with the font selection.
- Display duty : 1 / 16 to 1 / 128
- A 128-word character generator ROM (code 0101) T6963C-0101 is built in as standard.
- External display memory : 64 KB Max
 

The addresses in display memory of the text area, graphic area and external character generator area are determined by software.
- Read or Write operations from the CPU do not disturb the display.
- A crystal oscillator circuit is built in. The oscillation frequency is adjusted according to the display size. If using an external clock, use the XI pin as the clock input. (XO open.)
  - External capacitors Crystal oscillation : 20 to 30 pF
  - Ceramic oscillation : 30 to 100 pF
  - Built-in feedback resistor : 900 k $\Omega$  (typ.)
- Toshiba LCD driver LSIs (other than these with a built-in RAM) can be connected to the device.
- External display RAM must be static RAM. The T6963C cannot refresh D-RAM.
- The attribute functions can only be used in Text mode. They cannot be used in Graphic or Combination Character mode.

**Block Diagram**

## Pin Assignment

$\overline{ce0}$ (LOD)	Output	$\overline{ce0}$ at $\overline{DUAL} = H$ Chip enable pin for display memory in the address range 0000H to 07FFH LOD at $\overline{DUAL} = L$ Serial data output for odd columns in lower area of LCD										
$\overline{ce1}$ (LSCP)	Output	$\overline{ce1}$ at $\overline{DUAL} = H$ Chip enable pin for display memory in the address range 0800H to 0FFFH LSCP at $\overline{DUAL} = L$ Shift clock pulse output for column drivers in lower area of LCD										
$\overline{ce}$	Output	Chip enable pin for display memory of any address										
d0 to d7	I / O	Data I / O pins for display memory										
ad0 to ad15	Output	Address outputs for display memory (ad15 = L: for upper area of LCD, ad15 = H: for lower area of LCD)										
R / W	Output	Read / Write signal for display memory										
ED	Output	$\overline{SDSEL} = H$ : Data output for even columns in both upper and lower areas of LCD $\overline{SDSEL} = L$ : Data output for columns in both upper and lower areas of LCD										
HOD	Output	Data output for odd columns in upper area of LCD										
CDATA	Output	Synchronous signal for row driver										
HSCP	Output	Shift clock pulse for column driver of upper area of LCD										
LP	Output	Latch pulse for column driver. Shift clock pulse for row driver										
FR	Output	Frame signal										
XI	Input	Crystal oscillator input										
XO	Output	Crystal oscillator output										
CH1, CH2	Output	Check signal										
$\overline{T1}$ , $\overline{T2}$	Input	Test input. Usually open										
V <sub>DD</sub>	—	Power supply (5.0 V)										
V <sub>SS</sub>	—	Power supply (0 V)										

**Functional Definition**

- After power on, it is necessary to reset.  $\overline{\text{RESET}}$  is kept L between 5 clocks up (oscillation clock).
- When  $\overline{\text{HALT}} = \text{L}$ , the oscillation stops. The power supply for the LCD must now be turned off, to protect the LCD from DC bias.
- The HALT function includes the RESET function.
- The column / line counter and display register are cleared by RESET. (Other registers are not cleared.) Disable the display using the clear-display register.
- The status must be checked before data or commands are sent. The MSB = 0 status check must be done in particular. There is a possibility of erroneous operation due to a hard interrupt.
- STA0 and STA1 must be checked at the same time. When a command is executed, data transmission errors may occur.
- The T6963C can only handle one byte per machine cycle (16 clocks). It is impossible to send more than two data in a machine cycle.
- When using a command with operand data, it important to send the data first, and then execute the command.
- The character codes used by the T6963C are different from ASCII codes.

● State after RESET / HALT (Fig. 1)

Terminal	Halt	Reset
D0 to D7	F	F
d0 to d7	F	F
r / w	H	H
$\overline{ce}$	H (Note 1)	H (Note 1)
ad0 to ad15	H (Note 2)	H (Note 2)

XO	H	OSC clock

H : Level H

L : Level L

F : Floating (high impedance)

K0 : Test signal

VEND: Test signal

Note 1: In Attribute mode, H or L according to state of graphic pointer

Note 2: In Attribute mode, data of graphic pointer

● **The relationship between number of row / column and oscillation clock (Fig. 2)**

The frequency of the crystal oscillator is adjusted by the following formula.

f<sub>OSC</sub>: Frequency of oscillation

f<sub>SCP</sub>: Frequency of shift clock (f<sub>SCP</sub> = f<sub>OSC</sub> / 2)

f<sub>R</sub> : Frequency of Frame

M : Number of characters on one line (number of dots on one line 8 M)

For all font sizes (e.g. 7 × 8, 6 × 8, 5 × 8) the oscillation frequency remains constant.

N : Number of rows (duty = 1 / 8N)

$$\frac{8M}{f_{SCP}} \times 8N = \frac{1}{f_R}$$

$$f_{OSC} = f_R \times 64 \times 2 \times M \times N$$

$$(f_R = 60 \text{ Hz})$$

Unit: [MHz]

N \ M	32	40	64	80	Duty
2	0.492	0.614	0.983	1.229	1 / 16
	0.983	1.229	1.966	2.458	
4	0.983	1.229	1.966	2.458	1 / 32

Lower

- RAM Interface

The external RAM is used to store display data (text, graphic and external CG data).

With single-scan, text data, graphic data and external CG data can be freely allocated to the memory area (64 KB max).

With dual-scan, LCD I is allocated to 0000H to 7FFFH (32 KB max), LCD II is allocated to 8000H to FFFFH (32 KB max). Text data, graphic data and external CG data can be freely allocated in LCD I. In LCDII, the same addresses must be allocated as in LCD I, except ad15. ad15 determines selection of LCD I or LCD II.

It can be use the address decoded signals  $\overline{ce0}$  (0000 to 07FFFH),  $\overline{ce1}$  (0800 to 0FFFFH) within 4 KB.

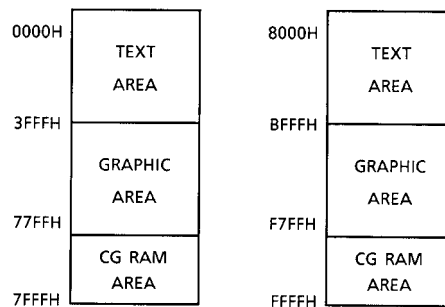

$\overline{ce0}$  and  $\overline{ce1}$  allow decoding of addresses in the ranges (0000 to 07FFFH) and (0800 to 0FFFFH) respectively within a 4-KB memory space.

(Example)

**(1) Single-Scan**

**(2) Dual-Scan**

CG : Character Generator

- **Flowchart of communications with MPU**

**(1) Status Read**

A status check must be performed before data is read or written.

Status check

The Status of T6963C can be read from the data lines.

$\overline{RD}$	L
$\overline{WR}$	H
$\overline{CE}$	L
C / D	H
D0 to D7	Status word

The T6963C status word format is as follows:

MSB						LSB	
STA7 D7	STA6 D6	STA5 D5	STA4 D4	STA3 D3	STA2 D2	STA1 D1	STA0 D0

STA0	Check command execution capability	0: Disable 1: Enable
STA1	Check data read / write capability	0: Disable 1: Enable
STA2	Check Auto mode data read capability	0: Disable 1: Enable
STA3	Check Auto mode data write capability	0: Disable 1: Enable
STA4	Not used	
STA5	Check controller operation capability	0: Disable 1: Enable
STA6	Error flag. Used for Screen Peek and Screen copy commands.	0: No error 1: Error
STA7	Check the blink condition	0: Display off 1: Normal display

Note 1: It is necessary to check STA0 and STA1 at the same time.

There is a possibility of erroneous operation due to a hardware interrupt.

Note 2: For most modes STA0 / STA1 are used as a status check.

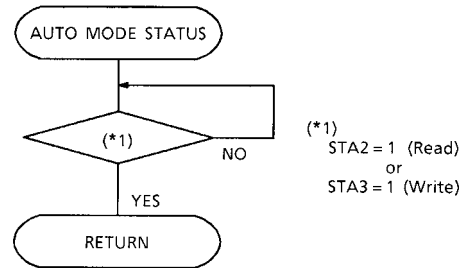

Note 3: STA2 and STA3 are valid in Auto mode; STA0 and STA1 are invalid.

Status checking flow

a)

b)

Note 4: When using the MSB = 0 command, a Status Read must be performed.

If a status check is not carried out, the T6963C cannot operate normally, even after a delay time. The hardware interrupt occurs during the address calculation period (at the end of each line). If a MSB = 0 command is sent to the T6963C during this period, the T6963C enters Wait status. If a status check is not carried out in this state before the next command is sent, there is the possibility that the command or data will not be received.

(2) Setting data

When using the T6963C, first set the data, then set the command.

Procedure for sending a command

a) The case of 1 data

b) The case of 2 data

Note: When sending more than two data, the last datum (or last two data) is valid.

## Command Definitions

	1111X110	—	—	Bit 6
	1111X111	—	—	Bit 7 (MSB)

X: invalid

● **Setting registers**

Code	Hex.	Function	D1	D2
00100001	21H	SET CURSOR POINTER	X ADRS	Y ADRS
00100010	22H	SET OFFSET REGISTER	DATA	00H
00100100	24H	SET ADDRESS POINTER	LOW ADRS	HIGH ADRS

**(1) Set Cursor Pointer**

The position of the cursor is specified by X ADRS and Y ADRS. The cursor position can only be moved by this command. Data read / write from the MPU never changes the cursor pointer. X ADRS and Y ADRS are specified as follows.

- X ADRS 00H to 4FH (lower 7 bits are valid)
- Y ADRS 00H to 1FH (lower 5 bits are valid)

a) Single- Scan

X ADRS 00 to 4FH

b) Dual- Scan

X ADRS 00H to 4FH

**(2) Set Offset Register**

The offset register is used to determine the external character generator RAM area. The T6963C has a 16-bit address bus as follows:

T6963C assign External character generator, when character code set 80H to FFH in using internal character generator. Character code 00H to 80H assign External character generator, when External generator mode.

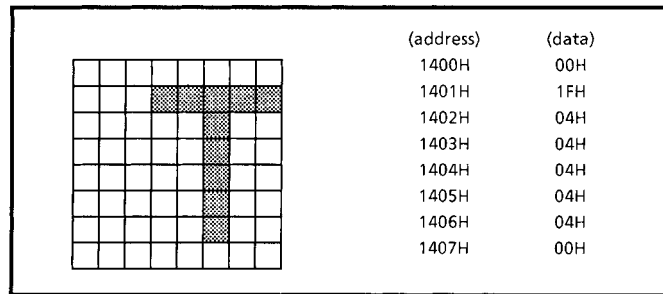

The senior five bits define the start address in external memory of the CG RAM area. The next eight bits represent the character code of the character. In internal CG ROM mode, character codes 00H to 7FH represent the predefined "internal" CG ROM characters, and codes 80H to FFH represent the user's own "external" characters. In external CG RAM mode, all 256 codes from 00H to FFH can be used to represent the user's own characters. The three least significant bits indicate one of the eight rows of eight dots that define the character's shape.

The relationship between display RAM address and offset register

Offset register data	CG RAM hex. address (start to end)
00000	0000 to 07FFH
00001	0800 to 0FFFH
00010	1000 to 17FFH
11100	E000 to E7FFH
11101	E800 to EFFFH
11110	F000 to F7FFH
11111	F800 to FFFFH

(Example 1)

Offset register	02H					
Character code	80H					
Character generator RAM start address	0001	0100	0000	0000		
	1	4	0	0		H

(Example 2) The relationship between display RAM data and display characters

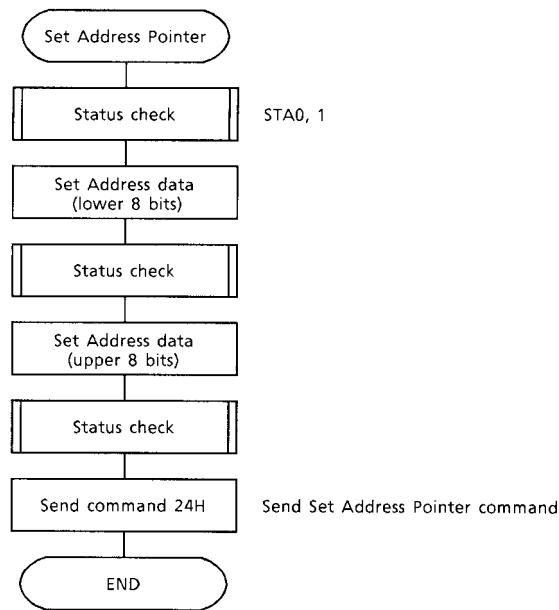

γ and ζ are displayed by character generator RAM.

**(3) Set Address Pointer**

The Set Address Pointer command is used to indicate the start address for writing to (or reading from) external RAM.

The Flowchart for Set Address Pointer command

• **Set Control Word**

Code	Hex.	Function	D1	D2
01000000	40H	Set Text Home Address	Low address	High address
01000001	41H	Set Text Area	Columns	00H
01000010	42H	Set Graphic Home Address	Low address	High address
01000011	43H	Set Graphic Area	Columns	00H

The home address and column size are defined by this command.

## (1) Set Text Home Address

The starting address in the external display RAM for text display is defined by this command. The text home address indicates the leftmost and uppermost position.

The relationship between external display RAM address and display position

TH		TH + CL
TH + TA		TH + TA + CL
(TH + TA) + TA		TH + 2TA + CL
(TH + 2TA) + TA		TH + 3TA + CL
TH + (n - 1) TA		TH + (n - 1) TA + CL

TH: Text home address

TA: Text area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

(Example)

Text home address : 0000H

Text area : 0020H

MD2 = H, MD3 = H : 32 columns

DUAL = H, MDS = L, MD0 = L, MD1 = H: 4 lines

0000H	0001H		001EH	001FH
0020H	0021H		003EH	002FH
0040H	0041H		005EH	005FH
0060H	0061H		007EH	007FH

## (2) Set Graphic Home Address

The starting address of the external display RAM used for graphic display is defined by this command. The graphic home address indicates the leftmost and uppermost position.

The relationship between external display RAM address and display position

GH		GH + CL
GH + GA		GH + GA + CL
(GH + GA) + GA		GH + 2GA + CL
(GH + 2GA) + GA		GH + 3GA + CL
GH + (n - 1) GA		GH + (n - 1) GA + CL

GH: Graphic home address

GA: Graphic area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

(Example)

Graphic home address : 0000H  
 Graphic area : 0020H  
 MD2 = H, MD3 = H : 32 columns  
 DUAL = H, MDS = L, MD0 = H, MD1 = H : 2 lines

0000H	0001H		001EH	001FH
0020H	0021H		003EH	003FH
0040H	0041H		005EH	005FH
0060H	0061H		007EH	007FH
0080H	0081H		009EH	009FH
00A0H	00A1H		00BEH	00BFH
00C0H	00C1H		00DEH	00DFH
00E0H	00E1H		00FEH	00FFH
0100H	0101H		011EH	011FH
0120H	0121H		013EH	013FH
0140H	0141H		015EH	015FH
0160H	0161H		017EH	017FH
0180H	0181H		019EH	019FH
01A0H	01A1H		01BEH	01BFH
01C0H	01C1H		01DEH	01DFH
01E0H	01E1H		01FEH	01FFH

### (3) Set Text Area

The display columns are defined by the hardware setting. This command can be used to adjust the columns of the display.

(Example)

LCD size : 20 columns, 4 lines  
 Text home address : 0000H  
 Text area : 0014H  
 MD2 = H, MD3 = H : 32 columns  
 DUAL = H, MDS = L, MD0 = L, MD1 = H : 4 lines

0000	0001	.....	0013	0014	.....	001F
0014	0015	.....	0027	0028	.....	0033
0028	0029	.....	003B	003C	.....	0047
003C	003D	.....	004F	0050	.....	005B

## (4) Set Graphic Area

The display columns are defined by the hardware setting. This command can be used to adjust the columns of the graphic display.

(Example)

LCD size : 20 columns, 2 lines  
 Graphic home address : 0000H  
 Graphic area : 0014H  
 MD2 = H, MD3 = H : 32 columns  
 DUAL = H, MDS = L, MD0 = H, MD1 = H : 2 lines

0000	0001	.....	0013	0014	.....	001F
0014	0015	.....	0027	0028	.....	0033
0028	0029	.....	003B	003C	.....	0047
003C	003D	.....	004F	0050	.....	005B
0050	0051	.....	0063	0064	.....	006F
0064	0065	.....	0077	0078	.....	0083
0078	0079	.....	008B	008C	.....	0097
008C	008D	.....	009F	00A0	.....	00AB
00A0	00A1	.....	00B3	00B4	.....	00BF
00B4	00B5	.....	00C7	00C8	.....	00D3
00C8	00C9	.....	00DB	00DC	.....	00E7
00DC	00DD	.....	00EF	00F0	.....	00FD
00F0	00F1	.....	0103	0104	.....	011F
0104	0105	.....	0127	0128	.....	0123
0128	0129	.....	013B	013C	.....	0147
013C	013D	.....	014F	0150	.....	015B

If the graphic area setting is set to match the desired number of columns on the LCD, the addressing scheme will be automatically modified so that the start address of each line equals the end address of the previous line + 1.

• Mode set

Code	Function	Operand
1000X000	OR Mode	—
1000X001	EXOR Mode	—
1000X011	AND Mode	—
1000X100	TEXT ATTRIBUTE Mode	—
10000XXX	Internal Character Generator Mode	—
10001XXX	External Character Generator Mode	—

X: invalid

The display mode is defined by this command. The display mode does not change until the next command is sent. The logical OR, EXOR, AND of text or graphic display can be displayed.

In Internal Character Generator mode, character codes 00H to 7FH are assigned to the built-in character generator ROM. The character codes 80H to FFH are automatically assigned to the external character generator RAM.

(Example)

GRAPHIC

TEXT

"OR"

"AND"

"EXOR"

Note: Attribute functions can only be applied to text display, since the attribute data is placed in the graphic RAM area.

Attribute function

The attribute operations are Reverse display, Character blink and Inhibit. The attribute data is written into the graphic area which was defined by the Set Control Word command. Only text display is possible in Attribute Function mode; graphic display is automatically disabled. However, the Display Mode command must be used to turn both Text and Graphic on in order for the Attribute function to be available. The attribute data for each character in the text area is written to the same address in the graphic area. The Attribute function is defined as follows.

d3	d2	d1	d0	Function
0	0	0	0	Normal display
0	1	0	1	Reverse display
0	0	1	1	Inhibit display
1	0	0	0	Blink of normal display
1	1	0	1	Blink of reverse display
1	0	1	1	Blink of inhibit display

X: invalid

● **Display mode**

Code	Function	Operand
10010000	Display off	—
1001XX10	Cursor on, blink off	—
1001XX11	Cursor on, blink on	—
100101XX	Text on, graphic off	—
100110XX	Text off, graphic on	—
100111XX	Text on, graphic on	—

X: invalid

Note: It is necessary to turn on "Text display" and "Graphic display" in the following cases.

- a) Combination of text / graphic display
- b) Attribute function

• **Cursor pattern select**

Code	Function	Operand
10100000	1-line cursor	—
10100001	2-line cursor	—
10100010	3-line cursor	—
10100011	4-line cursor	—
10100100	5-line cursor	—
10100101	6-line cursor	—
10100110	7-line cursor	—
10100111	8-line cursor	—

When cursor display is ON, this command selects the cursor pattern in the range 1 line to 8 lines. The cursor address is defined by the Cursor Pointer Set command.

1-line cursor

2-line cursor

8-line cursor

• **Data Auto Read / Write**

Code	Hex.	Function	Operand
10110000	B0H	Set Data Auto Write	—
10110001	B1H	Set Data Auto Read	—
10110010	B2H	Auto Reset	—

This command is convenient for sending a full screen of data from the external display RAM. After setting Auto mode, a Data Write (or Read) command is need not be sent between each datum. A Data Auto Write (or Read) command must be sent after a Set Address Pointer command. After this command, the address pointer is automatically incremented by 1 after each datum. In Auto mode, the T6963C cannot accept any other commands.

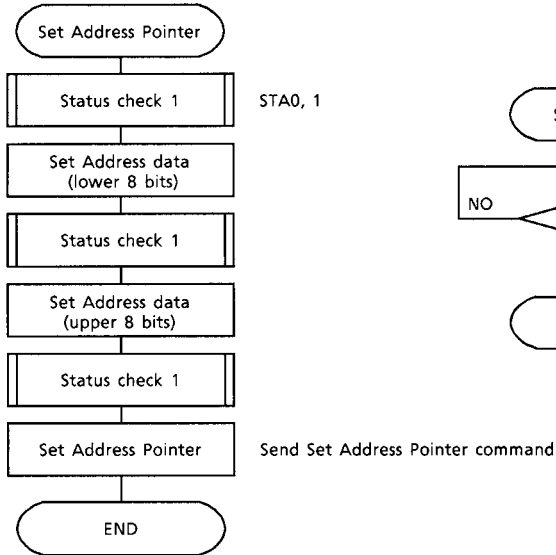

The Auto Reset command must be sent to the T6963C after all data has been sent, to clear Auto mode.

Note: A Status check for Auto mode (STA2, STA3 should be checked between sending of each datum. Auto Reset should be performed after checking STA3 = 1 (STA2 = 1). Refer to the following flowchart.

a) Auto Read mode

b) Auto Write mode

• **Data Read / Write**

Code	Hex.	Function	Operand
11000000	C0H	Data Write and Increment ADP	Data
11000001	C1H	Data Read and Increment ADP	—
11000010	C2H	Data Write and Decrement ADP	Data
11000011	C3H	Data Read and Decrement ADP	—
11000100	C4H	Data Write and Nonvariable ADP	Data
11000101	C5H	Data Read and Nonvariable ADP	—

This command is used for writing data from the MPU to external display RAM, and reading data from external display RAM to the MPU. Data Write / Data Read should be executed after setting address using Set Address Pointer command. The address pointer can be automatically incremented or decremented using this command.

Note: This command is necessary for each 1-byte datum.  
Refer to the following flowchart.

• **Screen Peek**

Code	Hex.	Function	Operand
11100000	E0H	Screen Peek	—

This command is used to transfer 1 byte of displayed data to the data stack; this byte can then be read from the MPU by data access. The logical combination of text and graphic display data on the LCD screen can be read by this command.

The status (STA6) should be checked just after the Screen Peek command. If the address determined by the Set Address Pointer command is not in the graphic area, this command is ignored and a status flag (STA6) is set.

Refer to the following flowchart.

Note: This command is available when hardware column number and software column number are the same.  
 Hardware column number is related to MD2 and MD3 setting.  
 Software column number is related to Set Text Area and Set Graphic Area command.

• **Screen Copy**

Code	Hex.	Function	Operand
11101000	E8H	Screen Copy	—

This command copies a single raster line of data to the graphic area.  
 The start point must be set using the Set Address Pointer command.

Note 1: If the attribute function is being used, this command is not available.  
 (With Attribute data is graphic area data.)

Note 2: With Dual-Scan, this command cannot be used (because the T6963C cannot separate the upper screen data and lower screen data).

Refer to the following flowchart.

Note: This command is available when hardware column number and software column number are the same.  
 Hardware column number is related to MD2 and MD3 setting.  
 Software column number is related to Set Text Area and Set Graphic Area command.

• Bit Set / Reset

Code	Function	Operand
11110XXX	Bit Reset	—
11111XXX	Bit Set	—
1111X000	Bit 0 (LSB)	—
1111X001	Bit 1	—
1111X010	Bit 2	—
1111X011	Bit 3	—
1111X100	Bit 4	—
1111X101	Bit 5	—
1111X110	Bit 6	—
1111X111	Bit 7 (MSB)	—

X: invalid

This command use to set or reset a bit of the byte specified by the address pointer. Only one bit can be set / reset at a time.

Refer to the following flowchart.

Character Code Map

The relation between character codes and character pattern (CG ROM TYPE 0101)

### LOAD CIRCUIT

$C_L = 50\text{pF}$  (including wiring and probe capacitance)

**T6963C Example of Application Circuit**

The T6963C can be directly connected to a TMPZ84C00A (Z80 Note 1: CMOS). The T6963C can be used with a TMPZ84C00A as shown in the following application circuit.

- **MPU memory address mapping**

Data is transferred to the T6963C using a memory request signal.

	Address
DATA (I / O)	XXXXH
Command / Status	XXXX + 1H

Note 1: Z80 is a trademark of Zilog Inc.

• **MPU I / O addressing**

Data is transferred to the T6963C using an I / O request signal.

	I / O Address
DATA	XXH
Command / Status	XX + 1H

• **When using PPI LSI (TMP82C55)**

The T6963C can be connected to a PPI LSI.

The port A connects to the data bus.

The port C connects to the control bus. ( $\overline{C/D}$ ,  $\overline{CE}$ ,  $\overline{WR}$ ,  $\overline{RD}$ )

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.  
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
